

Frontend walkthrough

[UI screens](#) / [File guide](#) / [Complete source appendix](#)

How the frontend works

The UI owns presentation and interactions; the API owns validation and persistent data.

Authentication uses a signed token; protected requests send it in the Authorization header.

Overview dashboard

Collection health, loans, availability, members, and recent activity in one place.

01

Four live metrics summarize copies, shelf availability, loans, and readers.

02

Collection-health bars update from MongoDB-backed totals.

03

Quick actions route directly to catalog, members, and circulation.

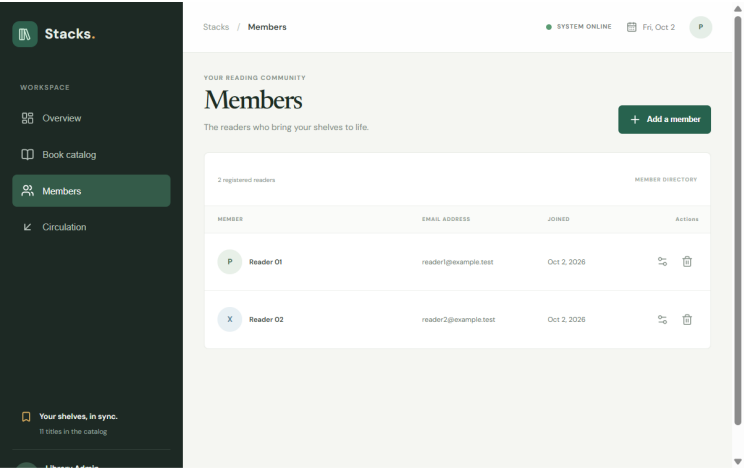

Book catalog

Search and maintain titles, ISBNs, categories, and copy availability.

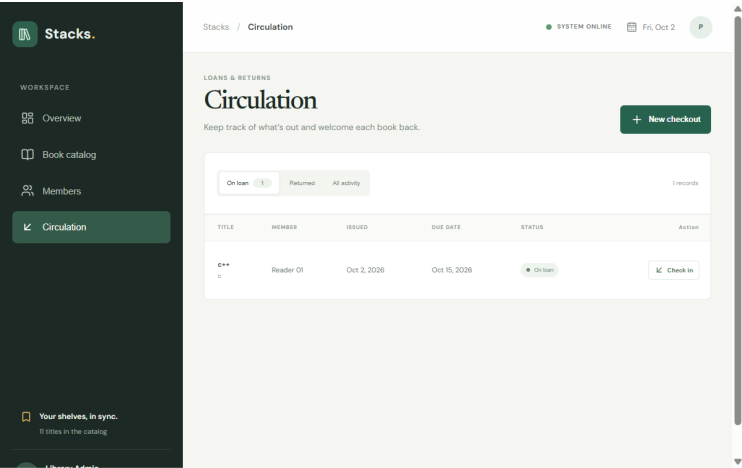

- 01 Search matches title, author, or ISBN.
- 02 Category and availability filters narrow the table.
- 03 Add, edit, and delete actions use the protected books API.

Members and book loans

Member records and check-in history are separate, connected by each issue record.

Members: create, edit, remove; open loans block deletion.

Circulation: check out, track due dates, and check in.

Add and edit forms

Dialogs gather structured data, validate required fields, and report API errors.

- 01 Book form records title, author, ISBN, category, and copy count.
- 02 Member form creates accounts with hashed passwords.
- 03 Checkout form requires a member, an available book, and a future due date.

Responsive workspace

On narrow screens the sidebar collapses to an icon rail and remains visible while scrolling.

01 Navigation stays available in the sticky side rail.

02 Tables scroll inside their own region instead of widening the full page.

03 Forms stack vertically on small screens.

Core runtime files

Complete text sources are reproduced after the presentation in the PDF appendix.

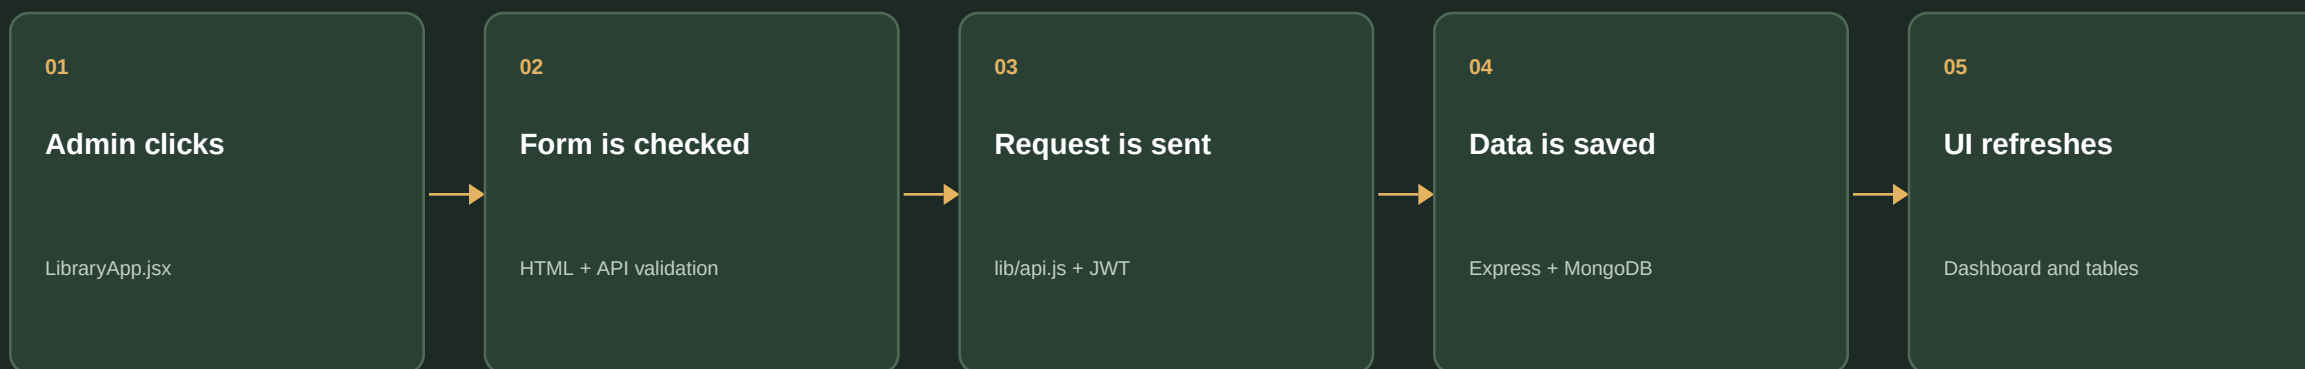

<code>package.json</code>	Frontend scripts and React, Vite, and icon dependencies.
<code>.gitignore</code>	Prevents generated frontend files from being committed.
<code>.oxlintrc.json</code>	Oxlint configuration used by the frontend lint command.
<code>README.md</code>	Vite starter documentation; app-specific setup is in the root README.
<code>index.html</code>	Browser document shell, page title, metadata, and React mount node.
<code>vite.config.js</code>	Enables the React plugin and configures Vite.
<code>src/main.jsx</code>	Bootstraps React and mounts LibraryApp into #root.
<code>src/LibraryApp.jsx</code>	Main UI: auth, dashboard, catalog, members, circulation, forms, and actions.

Styles, assets, and starter files

Complete text sources are reproduced after the presentation in the PDF appendix.

src/App.jsx	Unused Vite starter demo; main.jsx imports LibraryApp directly.
src/index.css	Global base styles from the Vite starter; loaded before app styles.
src/LibraryApp.css	Visual system and responsive styles for the Stacks workspace.
src/WorkspaceLayout.css	Pins the workspace navigation rail during page scrolling.
src/App.css	Unused Vite starter stylesheet; not imported by the running app.
src/assets/react.svg	Unused React starter illustration.
src/assets/vite.svg	Unused Vite starter illustration.
src/assets/hero.png	Unused Vite starter raster image; binary asset, not code.

One action, end to end

Build the app: `npm run build` | Rebuild this guide: `npm run documentation:build`

Code, file by file

18 text-based frontend files are included below. Generated package-lock data and the binary hero image are inventoried but omitted.

frontend/package.json

Frontend scripts and React, Vite, and icon dependencies. | 24 lines

frontend/.gitignore

Prevents generated frontend files from being committed. | 24 lines

frontend/.oxlinttrc.json

Oxlint configuration used by the frontend lint command. | 8 lines

frontend/README.md

Vite starter documentation; app-specific setup is in the root README. | 16 lines

frontend/index.html

Browser document shell, page title, metadata, and React mount node. | 14 lines

frontend/vite.config.js

Enables the React plugin and configures Vite. | 7 lines

frontend/src/main.jsx

Bootstraps React and mounts LibraryApp into #root. | 10 lines

frontend/src/LibraryApp.jsx

Main UI: auth, dashboard, catalog, members, circulation, forms, and actions. | 1307 lines

frontend/src/lib/api.js

Fetch wrapper: API base URL, bearer token, JSON requests, and errors. | 17 lines

frontend/src/App.jsx

Unused Vite starter demo; main.jsx imports LibraryApp directly. | 122 lines

frontend/src/index.css

Global base styles from the Vite starter; loaded before app styles. | 111 lines

frontend/src/LibraryApp.css

Visual system and responsive styles for the Stacks workspace. | 6 lines

frontend/src/WorkspaceLayout.css

Pins the workspace navigation rail during page scrolling. | 8 lines

frontend/src/App.css

Unused Vite starter stylesheet; not imported by the running app. | 184 lines

frontend/src/assets/react.svg

Unused React starter illustration. | 1 lines

frontend/src/assets/vite.svg

Unused Vite starter illustration. | 1 lines

frontend/public/favicon.svg

Public SVG favicon asset; not source logic. | 1 lines

frontend/public/icons.svg

Public icon sprite from the Vite starter; not used by the app. | 24 lines

1 # React + Vite
2
3 This template provides a minimal setup to get React working in Vite with HMR and some Oxlint rules.
4
5 Currently, two official plugins are available:
6
7 - [@vitejs/plugin-react](https://github.com/vitejs/vite-plugin-react/blob/main/packages/plugin-react) uses [Oxc](https://oxc.rs)
8 - [@vitejs/plugin-react-swc](https://github.com/vitejs/vite-plugin-react/blob/main/packages/plugin-react-swc) uses [SWC](https://swc.rs/)
9
10 ## React Compiler
11
12 The React Compiler is not enabled on this template because of its impact on dev & build performances. To add it, see [this documenta
13 tion](https://react.dev/learn/react-compiler/installation).
14
15 ## Expanding the Oxlint configuration
16
17 If you are developing a production application, we recommend using TypeScript with type-aware lint rules enabled. Check out the [TS
18 template](https://github.com/vitejs/vite/tree/main/packages/create-vite/template-react-ts) for information on how to integrate TypeS
19 cript and Oxlint's TypeScript related rules in your project.
